

Forklift Fork Positioner

Forklift Fork Positioners - A fork positioner is an apparatus made out of high quality materials designed to be able to withstand the most difficult procedures and work environments. This particular piece of equipment can enable the individual driving to be able to work the blades hydraulically without leaving the seat. Side shifting units have the added ability to laterally position the arms or the entire load so as to facilitate much more precise carrying and placement in a quicker and more effective manner.

The fork pocket is somewhat unique and enables the one operating it to safely swing the forks into position without any worry of damaging the positioning cylinders. This can allow the operator the alternative to be able to perform simultaneous or independent fork movement, dependent upon the job requirement. For most lift trucks with non-OEM carriages, complete carriages are needed. Standard OEM carriages can be transformed into fork positioners on existing units.
