The U.S. forklift division stationed in Cleveland has a expert team experienced in Sales, Purchasing, Marketing, Logistical and Technical Support.

In the beginning the domestic lift truck market in Korea was an open import enterprise. Korea Machinery Co. Ltd. started in 1960, to import fully assembled lift trucks as part of a domestic machinery expansion venture. Product sales of these products were originally targeted to state-run firms, large scale businesses, and the armed forces. This ultimately led to a unification with Daewoo Heavy Industries Ltd. In 1976, the Forklift Division commenced business operations throughout Korea to overhaul and sell this heavy equipment. By 1978, a forklift manufacturing plant was successfully completed. Continuous technical education grew to become the new focus for enhancing quality and product development.

Daewoo started the first home-based forklift business in 1967, and rapidly acquired a massive 90% share in the Korean Materials Handling market. By the 1980's, Daewoo's superior technological enhancements combined with sales success placed them in a situation of significant expansion of their forklift business.

In 1981, Caterpillar Industrial Inc. of the United States, proposed a joint venture project to counter act competitive pressures in the US materials handling industry. This plan greatly expanded Daewoo's forklift sales. Construction was completed in 1984 to facilitate a contemporary plant which helped launch the business for the fabrication of high added-value goods suited for export. In 1993, the company had a international sales network and started exporting versions they had developed through in-house technology, as an sovereign product. Certifications were then acquired from CE of Europe, UL of the United States and ISO 14001 and ISO 9001, securing expansion opportunities into overseas markets.
